Qualicision Smart Day Trader

PSI 

Qualicision Smart Day Trader

As a supplement to its integrated trading and risk management system PSImarket, PSI provides the newly developed Qualicision Smart Day Trader module for trading on the intraday market. This completes the existing workflow in short-term trading with the increasingly important possibility of balancing open positions on the market until

shortly before the start of delivery, thereby saving expensive balancing energy costs. Qualicision Smart Day Trader utilizes the well-approved PSI AI functionality to determine the structured residual positions, as well as the flexible contract management for modelling.

Managing intuitively and easily the challenges of the intraday power market with the help of Qualicision AI Trading decision-making

- ✓ All-in-One solution for the entire intraday trading process.
- ✓ Programmatic trading combined with systematic data analysis.
- ✓ High performance 24/7 process automation with trade execution with full position control for the trader.
- ✓ Trading at the best price and avoiding costly balancing energy.
- ✓ Comprehensive set of market standard Key Performance Indicators (KPIs).
- ✓ Intuitive handling of KPI and trade preferences.

For whom is Qualicision Smart Day Trader suitable?

Numerous companies from all over Europe benefit from PSI's software products. Whether large or small, marketing of renewable energy sources or conventional electricity, everyone finds their individual solution with our products.

We serve utilities and trading companies, TSOs and all other segments, which are trading their portfolio of renewables (wind & PV) or flexible positions (power plants & storage) on EPEX.

Product description

The Qualicision Smart Day Trader is fully integrated into the existing module landscape of PSImarket and uses proven functionality to determine the structured remaining positions, as well as flexible contract management for modelling. The integrated browser gives the user the opportunity to follow the trading process live.

The trading activities are prepared, calculated and carried out by the proven PSI system Qualicision using the Qualicision Functional Decision Design Engine with the integrated KPI-controlled, multi-criteria optimization. With this technology, the conflicting goals that constantly arise in retail are evaluated, balanced and resolved in real

time. It is based on a series of intuitive KPIs that are easy to understand in the course of trading, which traders can combine, weight and prioritize using an optimized parameterization interface according to their personal market assessments. No programming knowledge is required for this. In addition, the trader can achieve point-in-time results with the innovative learning algorithm F9118, which makes the decisions much more precisely.

The new module gives the trader an extremely powerful and innovative solution for managing the intraday market, which is important steps ahead of the competition.

How you benefit

- + Configure KPI and trade preferences individually and trade immediately, safely and profitably.
- + Complete integration into the existing PSImarket module landscape.
- + Extremely reliable automation of the intraday trading workflow.
