Transportation Management

PSItms - Customer Contracts and Service Billing

The module where all service data comes together. Generate billing data for all services provided directly at the source for an automated billing

PSItms collects all relevant process information on the services provided, for example from transportation management, warehouse management and any third-party systems. Customer contracts for logistics services are managed in the system. You define your standard price lists and can add customer-specific rate characteristics.

Functions

+ Customer contracts
+ Price lists, standard and customer rates
+ Data consolidation from all systems
+ Automated, cyclical billing
+ Reports and data analysis
+ Validation and approval of invoices
+ Invoice transfer to standard ERP systems SAP or Navision
+ Preparation and validation of reported data

PSI

Would you like to fully and automatically bill your transports and services?

PSItms customer billing closes the gap between customer contracts and recording of services in your production systems. You will never forget to bill entirely the services you have provided. Every piece of information relevant to billing – regardless of the system – is collected and processed in PSItms customer billing.

Facts

+ Contracts with versions, validities and historization
+ Crystal Reports integration for the creation of invoice documents
+ Rule-based condition technique for complex billing situations
+ Automation of the billing processes

Your benefits

+ Configuration of complex calculatory rules
+ Single Point of Truth – One central data platform for 100% billing of all your services
+ Full transparency and control over all your service items relevant to billing
+ Automated evaluation of standard price lists and customized conditions
+ Easy integration with third-party operational systems (including ERP systems, WMS, LVS, etc.)
